Bush cutters **DA** series

Catalogue part nr.: 99421

The hydraulic bush cutters **DA** series have been engineered for use on miniexcavators with a maximum operational weight ranging from around 1.5 t to 4.5 t. The cutter works thanks to the hydraulic power of the excavator, and can be plugged very easily thanks to the use of common attachment hoses. Three models with an operating width of **600, 800 and 1000** mm are available.

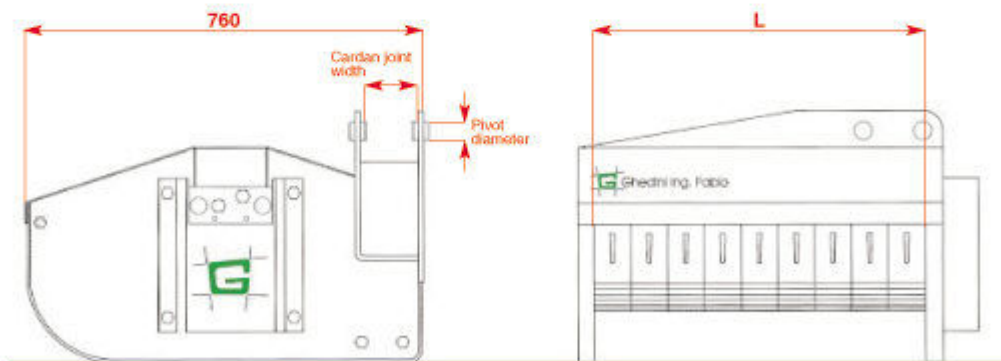

The hydraulic bush cutter **DA** series is equipped with a couple of "Y" shaped knives and a third one located in the middle, which allows it to reduce all treated material to fine grains.

DA series bush cutter technical specifications table

Model	Minimum oil flow rate required [litres/min]	Maximum pressure [bar]	Working width L [mm]	Weight [kg]	Machine Weight [kg]
DA 06	26	315	600	120	1500-2500
DA 08	34	315	800	140	2000-3500
DA 10	42	315	1.000	160	3000-4000

Upon request is available a kit that modifies the hydraulic system of the mini excavator permitting it to freely use its other movements while working with the bush cutter.
